Architecture	1
Wireframes	1
Entity Relationship Diagram	7
System Map	7

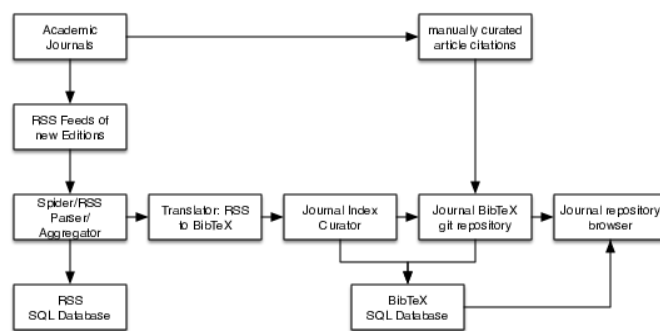

This design document collects all of the design artifacts that are used to describe what the project will look like.

Architecture

This is the conceptual system architecture.

Wireframes

A wireframe is a depiction of the user interface. This is usually non-interactive and may not have all of the details, but the wireframe is useful for planning the web pages involved in a project.

Entity Relationship Diagram

The Entity Relationship Diagram contains the business objects that we are modeling (Entities), as well as the ways those objects connect one another (Relationships).

System Map

There are usually several systems (including computers and programs) that coordinate in order to deliver the project. The System Map is a brief overview of these systems and how they relate to each other.
